

TB Clearance Documentation Form

(Hot Sheet)

CF/H-13b Revised 1/11

(mandatory)

The TB Clearance Documentation Form is used when a volunteer who has previously received a TB Test (ppd skin test or chest X-ray as needed) from the Head Start Nurse has been shown to have tested negative for tuberculosis and is requesting verification. The form is made up of 3 individual clearance cards. One card per volunteer is utilized.

Once the TB results are received and it is verified that the volunteer tested negative, the Head Start nurse will write in the name of the volunteer, date of clearance, and sign the form. The card is then issued to the volunteer for clearance.
