

Pediatric Hearing and Vision Screening Results

(Hot Sheet)

CF/H-7a Revised 1/17

(mandatory)

The program must obtain hearing and vision screening as age appropriate within 45 calendar days of child's first day of attendance or within 30 calendar days for programs operating less than 90 days.

Upon completion of hearing and vision screening, the nurse will document the results of the test. Parents will receive the yellow copy of H-7a once hearing and vision screenings have been completed. The data will be input into the data management tracking system, and the white copy will be filed in the child's health file.

If the child did not pass, the nurse will re-test the child two weeks later. If the child has failed twice, the parent/guardian will be informed about the results and the need for an MD to assess. The parent will be asked to take a referral form to the doctor's office at time of child's appointment. If the doctor determines need for further treatment, the nurse will monitor progress and make referral to appropriate medical provider and or specialist as needed. The Head Start Disabilities Specialist will receive a referral if needed. All testing results and monitoring will be updated in the data management tracking system and the child's health file.

- White: Child's Health File
- Yellow: Parent
